

## MuSeSPinger v3.0.0

, Friday 20 May 2011 - 20:00:04

Our oldest project

### MuSeSPinger

gets a major upgrade! **Huh? What's MuSeSPinger?**

MuSeSPinger stands for **M**ultiple **S**erver **S**tatus **P**inger. You can check websites to see if they are online or offline by the masses.?

### Why We Made MuSeSPinger

Wa-a-ay back in 2008, Deltik was hosted on a webhost called IsMyWebsite. IsMyWebsite was a unique webhost in that it had 16 servers called *nodes*. The nodes hosted different websites. We created a tool called IsMyWebsite Node Status Checker (IMWNSC), which was a hard-coded system that checked the status of all the nodes.

Over time, IMWNSC evolved from its narrow purpose into MuSeSPinger. MuSeSPinger was then improved and expanded.

### The First of Its Kind

You may think that we have reinvented the wheel because there are plenty of other services that check to see whether a website is online like Down For Everyone Or Just Me? and CheckSite.us.

MuSeSPinger is the first and only service that can:

- » check multiple URLs at the same time,
- » render an image that shows the status of multiple URLs, and
- » use a mirror network to check multiple URLs.

In addition to those unique core features, MuSeSPinger has:

- » a streamlined interface,
- » its source code available to anyone,
- » three different methods of checking URLs,
- » a user-friendly administration control panel, and
- » almost three years of dedicated support from Deltik.

?

### What's New?

See the changelog for yourself!

Or if you're too lazy:

**3.0.0 (2011/05/20) - NEW: Completely rewritten - NEW: Redesigned interface - NEW: cURL and file\_get\_contents for server status checking - NEW: MuSeSPinger network for worldwide server status checking - NEW: Option to render without the network: "Work Locally" - NEW: Status icons for "online with problems" and "status unavailable" -**

**NEW: No JavaScript compatibility - NEW: "Report Problem" link - NEW: Administration control center for modifying configuration - NEW: Fetch MuSeSPinger news from Deltik - MOD: URL input uses line breaks instead of spaces. - MOD: Remade status icons - MOD: Foreign language support removed - MOD: Automatic update system removed - MOD: 'update' directory re-purposed to MuSeSPinger news - MOD: Implemented GNU GPL License**
